Summary

Computer Science undergraduate with 6+ years of mobile app development experience, including a professional Flutter internship. Proficient in Dart, Kotlin, Java, and Python with hands-on experience in Firebase, REST APIs, GetX, MVVM architecture, and real-time data systems. Solid foundation in data structures and algorithms — arrays, linked lists, trees, graphs, sorting, hashing, and Big-O analysis. Passionate about building scalable, high-impact software and eager to contribute to large-scale engineering challenges at Google.

Education

B.Tech in Computer Science Engineering

2024 – Present

MEA Engineering College, Malappuram, Kerala (NAAC Accredited)

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Computer Networks, Operating Systems

Technical Skills

- **DSA:** Arrays & Strings, Linked Lists, Stacks & Queues, Trees & Graphs, Sorting & Searching, Hashing, Big-O Analysis
- **Languages:** Dart, Kotlin, Java, Python, C, SQL
- **Frameworks & Architecture:** Flutter, Jetpack Compose, GetX, MVVM
- **Backend & APIs:** Firebase (Firestore, Realtime DB, Auth, Storage, FCM, Cloud Functions), REST APIs, Razorpay, Postman
- **Tools:** Git, Figma, N8N, Google Play Console, Android Studio, VS Code

Experience

Flutter Developer Intern

Nov 2024 – Oct 2025

Quadvare Technologies, Perinthalmanna, Kerala

- Developed and maintained production-grade Flutter applications with optimized performance and smooth UI across Android devices
- Integrated Firebase Firestore and Authentication, enabling real-time data synchronization and secure user session management
- Consumed and debugged REST APIs using Postman, improving request/response validation and reducing integration issues
- Built reusable widget components, improving code maintainability and development velocity across multiple projects

Independent Mobile App Developer

2020 – Present

Self-directed Projects

- Built and published multiple mobile applications on Google Play, managing the full app lifecycle from design to deployment
- Iterated on real user feedback to improve UI/UX and resolve production bugs in live applications

Projects

StudyCo – Education Platform

Flutter, Dart, Firebase, GetX, Razorpay

- Built a full-featured educational platform with secure PDF viewer, offline downloads via `flutter_cache_manager`, and cart-based payment flow using Razorpay
- Implemented single-device login enforcement using hardware `deviceId` validation and real-time account moderation via Firestore
- Integrated Firebase Cloud Messaging (FCM) for push notifications and used GetX for reactive state management, routing, and dependency injection
- Secured premium content with screenshot prevention (`no_screenshot`) and managed environment secrets with `flutter_dotenv`

MotionComfort – Motion Sickness Reduction App

Kotlin, Jetpack Compose, MVVM

- Architected an Android app that uses real-time accelerometer data to generate synchronized visual cues (floating particles, horizon lines) reducing motion sickness in moving vehicles
- Implemented a persistent Foreground Service with `SYSTEM_ALERT_WINDOW` overlay, allowing the app to run on top of other applications continuously
- Used custom Canvas rendering in Jetpack Compose for smooth, physics-based animations aligned with live sensor input
- Followed MVVM architecture for clean separation of sensor logic, state management, and UI rendering

Jigsaw Puzzle Pro

Flutter, Dart, GetX, Pexels API

- Built a full-featured puzzle game with multiple difficulty levels (3x4, 4x5, 6x7), glassmorphism UI, background audio, and smooth animations
- Integrated Pexels REST API for dynamic online image search and implemented local gallery image picker for custom puzzles
- Designed a coin-based daily rewards system with local persistence using `shared_preferences` and managed all state with GetX

IPTV Streaming App

Kotlin, Jetpack Compose

- Developed a full-featured IPTV client integrating Xtream Codes API for live channels, VOD, and series playback
- Applied concurrency best practices to handle background network requests without blocking the UI thread, ensuring stable real-time streaming across media formats

Aima Blood Donation App

Flutter, Firebase

- Built a community app connecting blood donors and recipients with real-time search and direct contact features
- Prioritized accessibility and ease of use to serve users in urgent, time-sensitive scenarios

Leadership & Activities

Student Coordinator – FOSS Club, MEA Engineering College

2024 – Present

- Organized technical workshops and events promoting open-source software and collaborative engineering culture
- Participated in IEEE-led n8n Automation Workshop and ICFOSS Ubuntu Workshop, applying learnings in personal projects

Certifications & Achievements

- 6-month Flutter Development Internship – Quadvare Technologies (industry-level production experience)
- **1st Place – Logo Design Contest** (demonstrates design thinking alongside engineering skills)
- Participated in MILEN 7.0 Technical Camp – IEEE Student Branch
- Completed AI Tools & ChatGPT Workshop – be10x
- Participated in TARANG Tech Fest Project Expo
